WMTS - WILDFIRE MANAGEMENT TRAINING SYSTEM

The WMTS simulator, Wildfire Management Training System, thanks to a powerful customizable simulation environment, represents one of the most advanced teaching aids, where future Extinguishing Operations Managers (DOS) can be trained in a virtual environment, but able to faithfully represent all the main dynamics of forest fires, in a safe way.

Thanks to the use of a VR HEADSET, the student will have the opportunity to immerse himself in 360 ° within the simulation, where he will be free to move and closely follow the dynamics of the fires in progress.

With the help of headphones equipped with a microphone, an internal communication system will be implemented between the various participants in the simulation.
